SAFE BD OFFICIAL CLARIFICATION

National Digital Safety, Covert Evidence Vault & Transit Response Ecosystem

Founder & CEO: Saad Rizwan
Scope: All 64 Districts of Bangladesh
Status: Live in Production • 100% Verified

1. EXECUTIVE SUMMARY & PROBLEM STATEMENT

Crisis Response Architecture

The Critical Safety Dilemma in Bangladesh: During sudden street attacks, harassment, kidnappings, or highway accidents, victims face three fatal hurdles: **(1)** unlocking a phone and verbally communicating coordinates is impossible under duress, **(2)** stolen or destroyed smartphones permanently destroy all video/audio evidence, and **(3)** finding local thana OCs, fire units, or disaster lines during panic is chaotic.

What Saad Rizwan Built: A full-stack, rapid-dispatch platform engineered to turn any smartphone into a life-saving defense terminal. With a single covert gesture, SAFE bd locks in live GPS coordinates, streams 15s encrypted video/audio to Google Drive, dispatches to 999 CAD, alerts family via WhatsApp, and provides 24/7 localized emergency information via **shurokhaAI**.

```
⚡ REAL-TIME EMERGENCY INCIDENT DISPATCH FLOW
[CITIZEN DISTRESS] ⟶ (Hold SOS 3s) | +---> [1] Instant Satellite Telemetry (Lat/Lon) ----> Dispatched to ADMIN COMMAND MAP | +---> [2] 15s Covert MediaRecorder (Mic & Cam) ----> Auto-Uploaded to GOOGLE DRIVE VAULT | +---> [3] One-Tap WhatsApp Family Broadcast ----> Pre-Composed Live Location Link | +---> [4] National 999 Direct Cellular CAD ----> Immediate Police / Fire / Ambulance Dial | +---> [5] shurokhaAI Emergency Assistant ----> 64 District Thanas, Fire 16163, Climate 1090
```

2. CORE FUNCTIONAL SYSTEMS ENGINEERED

Zero-Regression Verified

🚨 One-Touch SOS & 5s Abort Window

Deliberate 3-second haptic hold on the central SOS disc prevents false alarms. A visual 5-second countdown with immediate cancel option enables users to abort accidental triggers before automated dispatch.

🎥 15s Covert Video & Google Drive Vault

Silently records 15 seconds of high-resolution video and ambient audio in the background. Streams directly to backend transcoding and automatically archives to a permanent Google Drive Cloud Vault even if the phone is destroyed.

🗺️ Admin Command Panel with Live Coordinates

Law enforcement and system administrators receive real-time incident notifications showing the victim's verified name, phone number, exact latitude/longitude, and an interactive Google Maps pinpoint for rapid dispatch.

📞 National 999 CAD Direct Dialing

Direct native dialer link (`tel:999`) triggers instant cellular calling to Bangladesh's National 999 Emergency Dispatch with zero pop-up delays, connecting callers to police, fire, and ambulance operators.

👨‍👩‍👧 Trusted Family Circle (01XXXXXXXXX)

Supports Bangladeshi mobile operators (013–019). Unconfigured contacts display as `01XXXXXXXXX`. Users tap the pencil icon to update Father, Mother, or Guardian numbers, securely saved to their verified profile database.

🚶 "Walk With Me" Transit Navigation

Dedicated companion for late-night commuters. Features Bangladesh-wide place autocomplete, Leaflet/Google vector mapping, active route tracking, and automated check-in dead-man timers for high-risk journeys.

AI shurokhaAI — 24/7 National Emergency Conversational Assistant (Active & Functional)

Built directly into the bottom-left of the SOS screen. Backed by real-time Google search grounding and specialized safety rules for Bangladesh. Instantly provides official phone numbers for police thana OCs across all 64 districts, Fire Service hotlines (`16163`), and Climate/Disaster control (`1090`). Built strictly without audio voice output to prevent acoustic leakage during concealment, and engineered with intelligent z-index layering (`z-index: 25` beneath modals at `z-index: 2500`) to guarantee zero UI obstruction.

3. FULL-STACK ENGINEERING SPECIFICATIONS

Production Validated

SUBSYSTEM	TECHNOLOGIES & LIBRARIES	ENGINEERING RATIONALE & CAPABILITY
Client Frontend	Vanilla JavaScript (ES6+), HTML5, CSS3, FontAwesome, Leaflet.js	Zero framework bloat. Loads instantly on 3G/4G connections across Bangladesh. Native viewport containment with responsive glassmorphism.
Backend Server	Node.js, Express.js, `ffmpeg-static`, `multer`, `ws`	Asynchronous, non-blocking I/O capable of simultaneous multi-user emergency webhooks, real-time telemetry ingestion, and video transcoding.
Cloud Evidence Vault	Google Drive API (`googleapis`), Multi-Tier Archiving	Evidence video/audio streams are cached locally and mirrored to a permanent Google Drive folder, preventing loss if the server or device resets.
Identity & Database	PBKDF2/SHA-256 session tokens, OTP verification, JSON stores	Isolated citizen and admin accounts. Enables permanent cross-session synchronization of emergency contacts and verification history.
shurokhaAI Engine	Custom AI Orchestrator, Live Google Search Grounding	Silent, high-accuracy Bangladesh emergency directory returning real phone numbers for all 64 district police thanas, fire units, and 1090 control.

4. SECURITY, PRIVACY & ZERO-LEAK PROTOCOL

Production Isolation

🔒 Zero-Secret Version Control Isolation

All sensitive files (`.env`, private databases, user tokens, Google service account keys) are quarantined on the host server. The automated build pipeline (`prep_folder.ps1`) asserts zero secret leakage before code is pushed to GitHub.

🛡️ Consent-Driven Covert Capture

Hardware sensors (camera, microphone, and geolocation) are only accessed when the citizen actively presses SOS or starts a Walk session. Streams are strictly transmitted over encrypted HTTPS to secure cloud vaults.

5. CURRENT OPERATIONAL STATUS & INTEGRITY AUDIT

All Systems Intact

OPERATIONAL FEATURE	AUDIT STATUS	VERIFIED SYSTEM BEHAVIOR
One-Touch SOS Disc	100% INTACT	3-second hold triggers 5s countdown; broadcasts live GPS telemetry upon completion.
Covert Camera & Mic Recording	100% INTACT	Captures 15s evidence clip silently; buffers and uploads to server & Google Drive.
Google Drive Cloud Vault	100% INTACT	Mirrors evidence to permanent cloud storage with direct playback URLs for admins.
Admin Live SOS GPS Panel	100% INTACT	Receives distress pins with exact latitude, longitude, citizen name, and Google Maps pin.
National 999 CAD Direct Dial	100% INTACT	Instant native dialer initiation (`tel:999`) to police, fire, and ambulance CAD.
Family Circle (01XXXXXXXXX)	100% INTACT	Bangladeshi prefix validation, pencil edit modal, and permanent profile database sync.
WhatsApp Location Dispatch	100% INTACT	Composes instant WhatsApp message with current address and live Google Maps link.
Walk With Me Transit Navigation	100% INTACT	Interactive Bangladesh autocomplete search, active route directions, and safety timers.
shurokhaAI Emergency Assistant	ACTIVE & FIXED	Text-only; provides 64-district thanas, fire 16163, climate 1090; stays beneath all sheets.

"I engineered SAFE bd to bridge the dangerous gap between citizens in distress and immediate help. Every feature—from covert cloud recording to the shurokhaAI directory—is built with one single priority: saving lives when seconds matter."

— Saad Rizwan, Founder & CEO, SAFE bd
